**DETAILED ACTION**

**1. Claims 1-10 are rejected under 35 U.S.C. 112, first paragraph, because the specification, while being enabling for carbon particles, does not reasonably provide enablement for carbon compounds. The specification does not enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make the invention commensurate in scope with these claims. A carbon compound read on materials which are neither contemplated nor disclosed.**

**2. Claims 1 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.**

**3. Claim1 is rejected under 35 U.S.C. 112, second paragraph, as being incomplete for omitting essential steps, such omission amounting to a gap between the steps. See MPEP § 2172.01. The omitted steps are: introducing the composition, i.e., the polymer and carbon compound into a mold, and where the composition is placed with respect to the interior and exterior walls of the mold. For**

**example, a composition can be put into a mold and not between the interior and exterior walls and a gas can be passed through the composition and the walls. It is appears from applicant's specification, that the composition is placed between the walls and the walls provide the molding cavity.**

**4. Claims 2-10 are objected to as being dependent upon a rejected base claim.**

**5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Lear et al. teach a process for the production of porous shaped articles.**
